

THE MEANING OF *SCIENCE*

17th **EP** *Meeting*

28/9/2012 Catania

Mattia Famoso

My question is:

**What is your idea of
“science”?**

It's time to try to giving an answer

**first of all, we have to introduce an
apparently strange concept:**

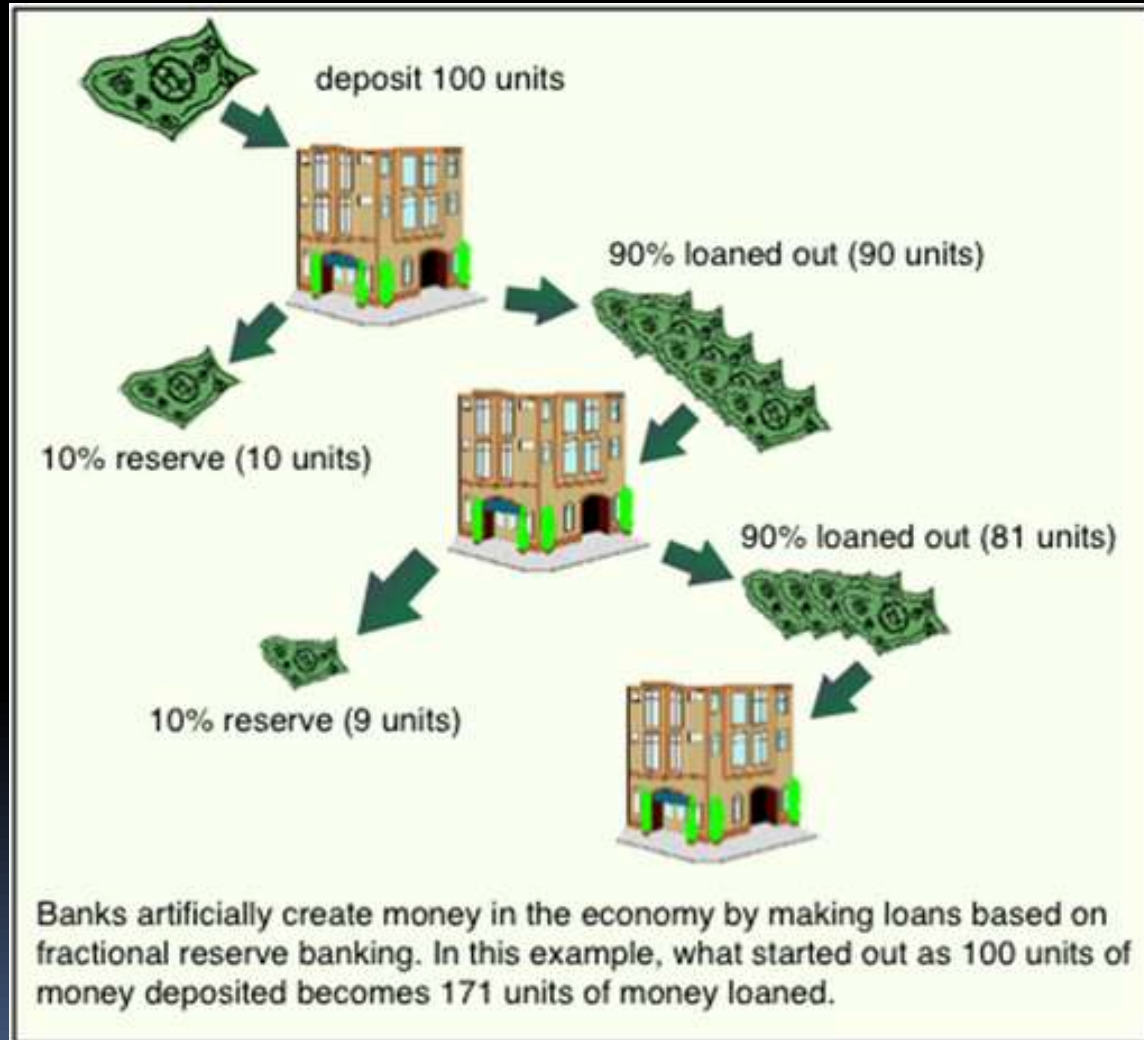

MONEY MAKE SYSTEM!!

*...in our world the 40% of global
riches is in the hands of the 1% of
people ... thus,
there is something wrong in this...*

Zeitgeist

“Fractional Reserve”

Money has got *no real value* but today with money
we can buy *everything*, and ... yes,

you can “buy” science too!

even

... science can't be marketable ...

E. Boggio Lera

Something about technological progress ...

What people do not know is that with our technological and scientific knowledge we can rest for most time of our “work life” because today by robots we can substitute human work for

97%!!

Renewable energy

It is an example of technological
improvement

Today we all talk about this, but only
someone knows its real potentiality ...

A few inventions

- Energy-saving light bulbs;
- AC electricity;
- Electric engines;
- Radio and wireless;
- Idea of communications by television, internet, ecc;
- Solar, wind, waves, water (etc.) energy;

... science is a perversion only, if it is not used
for ameliorating of human life conditions ...

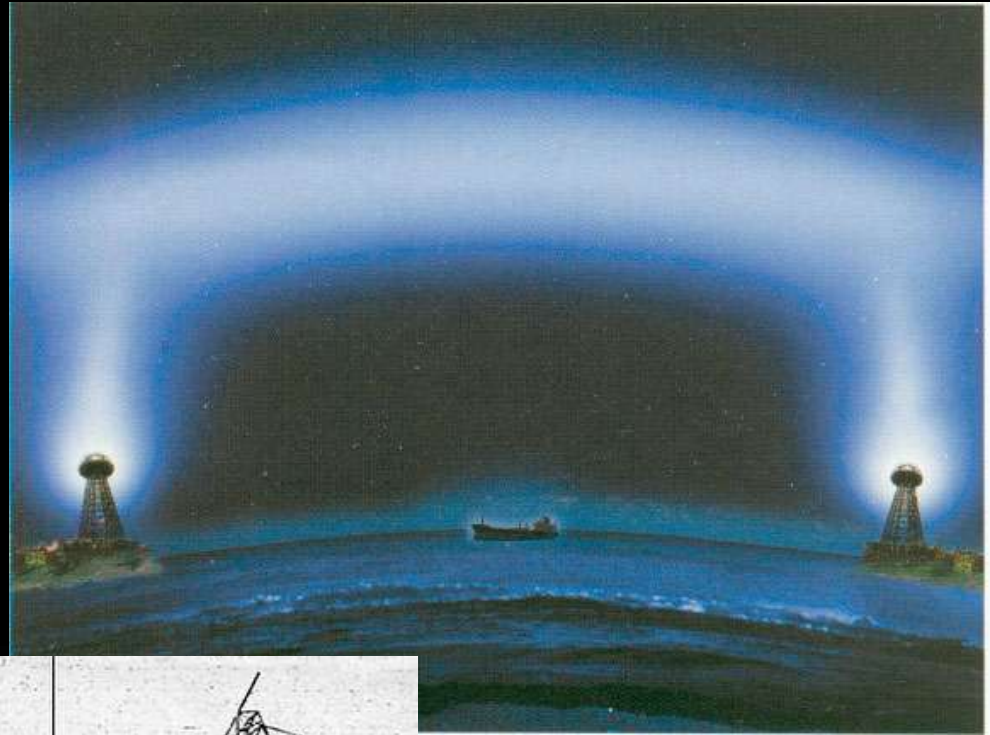

... I think that money have not the value that
men gave to it until today ...

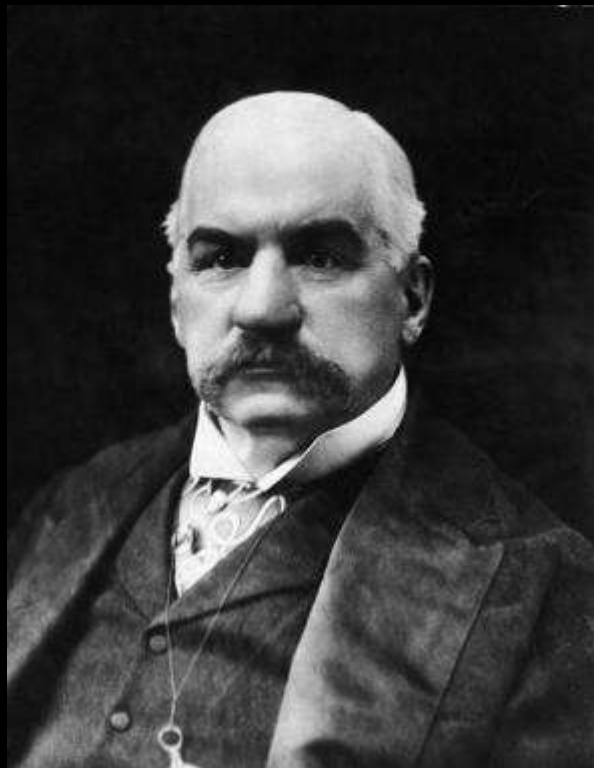

Desire for material advantages has never
animated me in all my activities ...

Nikola Tesla

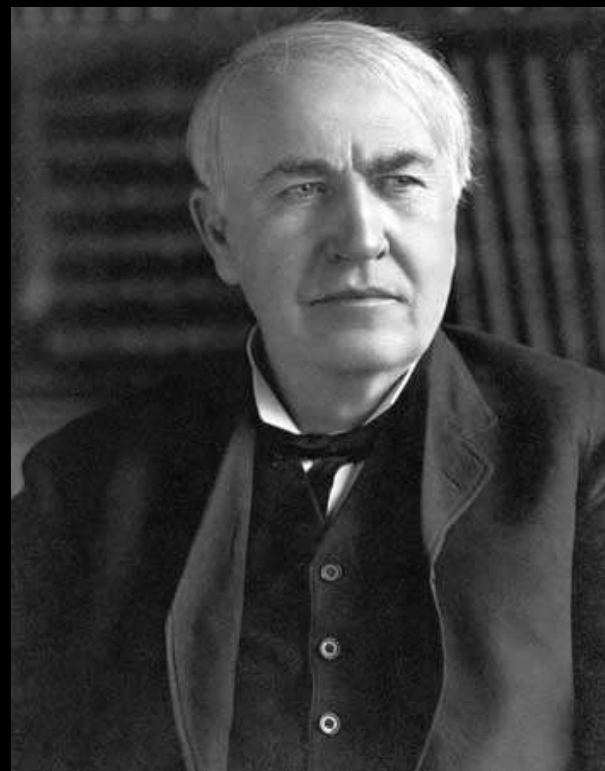

Wanderclyffe Tower

J.P. Morgan

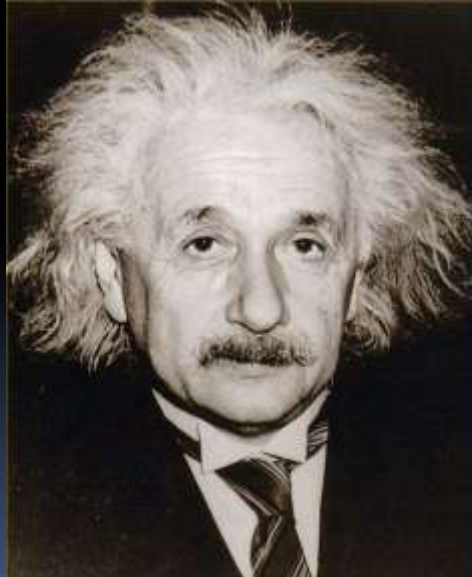

Thomas Edison

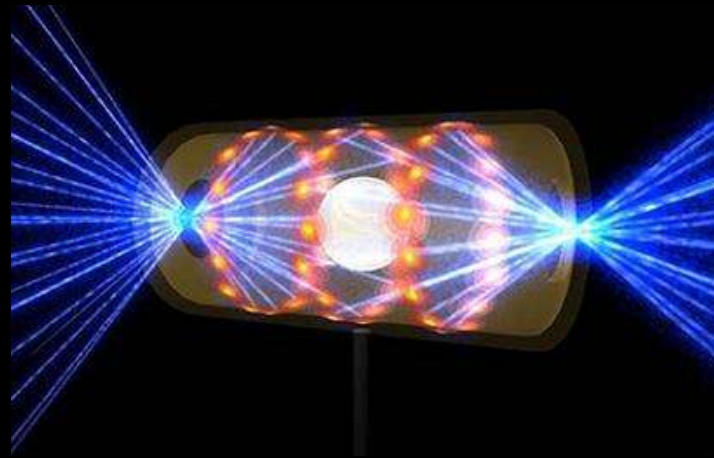

First Thomas Edison electric chair

...our progress is like the axe in the hands of a
killer...

A. Einstein

N.I.F.

192 lasers in one spot (a solid hydrogen BB) ... the laser has a power of 500 TW (like the entire energetic production of U.S.A) ... when laser hits the BB we have a thermonuclear reaction with the same energy of our sun!!

conclusions

You scientists (of the present and future generations): your task is not to make money; you have to work for future generations. We have to build up a future in which everybody can live in peace with other people and with nature ...

... we have to help the society (ours) that seems to go toward its destruction its self ... you have to be REAL scientists!! Future of Mankind is in your hands ...

...we are too conceited, we want that future generation won't forget us after we won't be...

B. Pascal

...man invented atomic bomb, but there's no mouse that will build a mouse trap...

A. Einstein
